PROFESSIONAL SUMMARY

AWS Certified AI and Cloud Practitioner with 2+ years of software engineering experience building full-stack and backend applications using Python, FastAPI, React, TypeScript, REST APIs, and AWS cloud technologies. Experienced in developing production-grade APIs, secure enterprise workflows, data-driven applications, and AI-enabled solutions, including LLM/RAG-based knowledge retrieval and workflow automation. Strong technical foundation in application security, database optimisation, Docker, AWS, and Agile software delivery, complemented by hands-on experience building end-to-end full-stack and AI projects.

SKILLS

Functional Competencies: Full-Stack Development | Python Backend Development | REST API Design | React Application Development | Microservices & Service-Oriented Architecture | Authentication & Authorisation | JWT / RBAC | Database Design & Query Optimisation | AI/LLM Integration | RAG & Knowledge Retrieval | Workflow Automation | Cloud Deployment | Docker & CI/CD | Production Debugging | Agile/Scrum

Technical tools: Python | FastAPI | React | TypeScript | JavaScript | REST APIs | Java | PostgreSQL | MySQL | MongoDB | Redis | SQLAlchemy | AWS | Docker | Git | GitHub | GitLab | JWT | OAuth 2.0 | LLM APIs | RAG | Anthropic Claude API | OpenAI API | LangChain | LlamaIndex

EXPERIENCE

Full Stack Engineer (Full-Time, 2 years) — Brane Group

Jul 2022 – Sep 2024

- Engineered and delivered enterprise web applications and backend services using Python, FastAPI, React, TypeScript and REST APIs, developing 20+ production API modules across the full software development lifecycle.
- Designed and maintained secure Python/FastAPI backend services for enterprise workflows, implementing JWT authentication, RBAC, request validation, and structured error handling. Improved typical API response times by approximately 25% through service-layer optimisation and more efficient request processing.
- Built responsive, component-based React applications with TypeScript and reusable UI components, delivering dashboards, forms and workflow-driven interfaces for 3+ core enterprise workflow areas, reducing repetitive frontend implementation effort by 20% through reusable component patterns.
- Designed and optimised data-driven functionality using PostgreSQL, MySQL, MongoDB and Redis, applying indexing, query optimisation and caching, improving frequently accessed query response times by ~30%; contributed to the FRMS platform supporting 4 resource categories: counters, gates, belts and stands.
- Developed AI-enabled enterprise services across 2+ solution areas using Python and FastAPI, contributing to facial-recognition workflows and later LLM/RAG-based knowledge solutions, helping automate business-document generation and reduce manual documentation effort by 25% across supported workflows.

Full Stack Development Intern — CodSoft

Jan 2022 – Jun 2022

- Architected and layered a Student Course Registration System using a layered architecture across entity, service, persistence, and presentation layers, implementing validation rules to prevent duplicate enrolments and invalid course-drop operations.
- Built and isolated a JDBC persistence layer behind a dedicated DatabaseManager component, separating database access from application and presentation logic.
- Developed an interactive calculator using JavaScript, CSS Grid, and responsive UI patterns, implementing keyboard support and error handling for invalid user input.
- Constructed and styled 3 multi-section responsive pages with HTML5, CSS3, Bootstrap 4, and Flexbox, applying the 12-column grid to hold layout consistent across mobile, tablet, and desktop.
- Delivered and documented 9 end-to-end projects solo — requirements to submission — across 2 GitHub repositories with structured commits, at 100% on-time submission.

PROJECTS

Jobhuntz — Full-Stack AI Application ([GitHub](#))

2026

Next.js 16, TypeScript, Supabase (Postgres, Auth, RLS), Anthropic Claude API, Vercel

Live: jobhuntz.app

- End-to-end LLM product combining full-stack engineering with applied AI — multi-step prompt orchestration, provider abstraction, and production-grade auth/security, all designed, built, and shipped solo.
- Architected an 8-step LLM pipeline (JD analysis → tailored CV + cover letter → ATS scoring) with structured JSON contracts between steps and per-step integrity checks that trace every output claim to source, preventing model fabrication.
- Engineered a provider-agnostic routing layer across 3 LLM providers with a tiered access system (free-tier quota → user-supplied keys), enforced server-side via Postgres SECURITY DEFINER functions and column-level grants.
- Secured multi-tenant data with Supabase Auth (3 OAuth methods), row-level security, and AES-256-GCM encryption for user-supplied credentials; ran a full pre-launch security audit and remediated 8 findings across BLOCKER/SERIOUS/MINOR severities.

RideX — Full-Stack Ride-Hailing Platform ([GitHub](#))

2025

React 19, Firebase, Stripe, Mapbox, Vercel

Live: uber-demo-omega.vercel.app

- Architected and shipped a production-grade, three-portal marketplace (customer, driver, admin) end-to-end — owning UI, secure REST APIs, cloud data modelling, payment infrastructure, and DevOps as a solo engineer.
- Engineered 8 serverless REST APIs (Node.js/Cloud Functions) with JWT verification, rate limiting (100 req/15 min) and idempotent Stripe processing — automating an 80/20 commission split with penny-accurate, double-charge-proof payments and 3-D Secure (SCA) compliance.
- Built real-time ride dispatch with Firestore listeners and ACID transactions — delivering sub-second GPS/status sync, zero double-bookings under concurrent driver acceptance, and 15s offer timers — validated by 90+ Jest/React Testing Library automated tests.
- Delivered the full 3-portal system in under 12 weeks by pairing full-stack ownership with AI-augmented engineering (Claude Code, prompt-engineered agentic workflows) and automated GitHub→Vercel CI/CD — the exact end-to-end delivery and AI-native tooling fluency this role demands.

EDUCATION

MSc Computer Science, University of East London

Jan 2025 – Jan 2027

- AWS-accredited programme focused on Software Engineering, Cloud Computing, and AI applications.
- Research Assistant on AssetGuard+, a university-backed AI cybersecurity startup — evaluated 11 industry asset-management platforms (Axonius, Qualys, Tenable, runZero) using verified user reviews and industry reports, delivering a comparative gap analysis that informs the platform's development priorities.
- Selected for the AssetGuard+ Full Stack Development Team, collaborating with the academic technical lead to design and build core features of an AI-powered cyber asset identification platform.

BSc Computer Science, Keshav Memorial Institute of Technology

Jul 2019 – Jul 2023

- Graduated with Distinction; coursework in Data Structures, OOP, Databases, and Software Engineering.

CERTIFICATIONS

- Aws Certified AI practitioner | AWS Certified Cloud Practitioner

RIGHT TO WORK

- Eligible for Full-time work | Immediately Available | No sponsorship Required
